

Recipient screening for use with donors positive for Carrier Conditions

We offer a comprehensive package for testing couples and individuals wishing to know their genetic carrier status as part of their family planning.

In accordance with professional guidelines, there are several recommended steps required before proceeding with genetic testing to guide patients on the implications for them and their wider families.

The screening is designed to match the genetic testing used to screen sperm and egg donors and to provide you with options for understanding and reducing the risk of a recessive disease in a child.

The screening is discussed with you in depth, so you can select the right carrier screen for you.

Pre-test discussion

- To review the benefits, limitations and possible outcomes of screening. This is an opportunity to ask questions to ensure you are fully informed before consenting and proceeding with genetic testing. A detailed consultation letter is provided for you to share with your clinic demonstrating that you have had genetic counselling enabling you to proceed with treatment with your donor with or without further screening.

£150

Carrier Check

- for screening the specific genes of interest against a known carrier
(Analysis of additional genes within 2 years of Carrier Check is charged at £,300)
